

TECHNOLOGY PARTNERSHIP BRIEF · MARCH 2026

Technology Partner Opportunity

Trinity Air Link Transportation System | Founding Technology Partner Program

Become a founding technology partner in the world's first integrated eVTOL–Autonomous Vehicle transportation hub. Real-world deployment platform, reference customer status, and joint IP development in a \$41B+ market.

SECTION 01 · THE OPPORTUNITY

Why Partner with Trinity Air Link?

Real-World Deployment	Reference Customer	System Integration
Live metropolitan-scale testing environment with 8.5M potential users — not a lab or simulator	Nation's first integrated hub — case study and proof point for every subsequent sale globally	Cross-platform data sharing and AI optimization unavailable in isolated single-technology deployments

Market Timing — The Window Is Now: Texas DOT + Archer Aviation selected for White House eIPP (March 9, 2026). Archer Midnight air taxi operations begin Texas H2 2026. Joby Aviation at FAA certification Stage 4/5. Waymo at 450,000+ weekly paid rides in Austin, TX. The Link is positioned to be operational when commercial-scale eVTOL fleet demand arrives in DFW.

SECTION 02 · TECHNOLOGY CATEGORIES

Partnership Opportunities by Technology Domain

eVTOL Aircraft Systems

ACTIVE PROCUREMENT 2027–2028

Initial fleet of 10–15 aircraft (~\$1.3M/unit manufacturing cost), scaling to 25–40 units by Year 5. Requirements: 4–6 passenger capacity, 15–60 mile range, electric propulsion, autonomous capability with pilot override. Partners: Joby S4, Archer Midnight, and compatible alternatives. Opportunities include aircraft supply/leasing, maintenance partnerships, pilot training, fleet management integration.

Autonomous Vehicle Fleet

ACTIVE PROCUREMENT 2027–2028

Level 4+ autonomous platform for first/last-mile connectivity. Fleet of 50–100 vehicles by Year 5. Requirements: Electric powertrain, fast charging, 4–8 passenger capacity, weather adaptability, hub traffic management integration. Waymo, May Mobility, and comparable platforms. Opportunities: fleet supply agreements, software updates, charging infrastructure, maintenance partnerships, data sharing.

AI Traffic Management & Routing Platform

DEVELOPMENT PARTNERSHIP 2026–2027

Multi-modal coordination system integrating air and ground transportation in real time. Requirements: Real-time routing/scheduling optimization, weather integration, safety monitoring, passenger interface, emergency response protocols. Opportunities: Software platform development, AI algorithm optimization, data analytics, cybersecurity integration, mobile app development.

Charging & Energy Infrastructure

INFRASTRUCTURE BUILD 2027

High-speed EV charging for both eVTOL aircraft and AV ground fleet. Integrated energy management and grid coordination. Requirements: VTOL landing pad support systems, rapid charging capability, energy management, renewable integration. Opportunities: Infrastructure design, energy systems, building automation, telecommunications.

Innovation Center Technology Platform

LONG-TERM PARTNERSHIP

120,000 sq ft of innovation space (floors 2–7) as a technology development hub. Anchor tenant opportunities for eVTOL/AV research, AI development, urban mobility startups. Lease rates: \$29–37/sq ft (Fort Worth Class A). Access to live operational data from hub systems for R&D.

SECTION 03 · PARTNERSHIP MODELS

Flexible Partnership Structures

Technology Supply Partnership • Equipment purchase or leasing agreements • Preferred pricing for initial deployment • Performance-based contracts with outcome metrics • Volume commitments supporting partner business planning • Exclusive territory rights for technology categories	Joint Development Partnership • Shared-cost R&D programs • Hub as proving ground for next-gen tech • Joint IP ownership for co-developed innovations • Standards development participation • Certification support and co-navigation
Strategic Investment Partnership • Equity investment for strategic alignment • Revenue sharing based on system performance • Joint venture structures for specific components • Licensing agreements for proprietary technology • Exit participation in future M&A or IPO	Innovation Center Tenancy • Premium research lab and office space • Anchor tenant preferred lease terms • Access to live hub operational data • Co-location with complementary tech companies • Fort Worth Class A rates: \$29–37/sq ft

SECTION 04 · DEVELOPMENT TIMELINE

Partnership Integration Milestones

PHASE 1 2026 · Months 1–12 • Technology partner identification • Requirements specification • Partnership agreement execution • Joint development planning • Innovation center pre-leasing	PHASE 2 2027 · Months 13–24 • Component development begins • Integration planning and testing • Charging/landing infrastructure • Certification preparation • Innovation center opens	PHASE 3 2028 · Months 25–36 • System integration and testing • Fleet deployment • Performance validation • Regulatory certifications • Pilot operations	PHASE 4 2029+ · Commercial Ops • Full commercial operations • Continuous optimization • Market expansion planning • Next-gen R&D begins • Franchise licensing to new markets

SECTION 05 · WHAT PARTNERS GAIN

Competitive Advantages for Technology Partners

Market & Business Benefits

- ✓ First-mover positioning in integrated urban mobility
- ✓ Real-world technology validation at metropolitan scale
- ✓ Reference customer status for global sales efforts
- ✓ Industry leadership and thought leadership positioning
- ✓ Access to 8.5M DFW market from day one
- ✓ Expansion pathway to 50+ U.S. metropolitan markets
- ✓ Co-marketing and joint PR opportunities
- ✓ Conference participation and media exposure

Technical & Innovation Benefits

- ✓ System-level optimization improving individual component performance
- ✓ Cross-platform data sharing enhancing AI/ML capabilities
- ✓ Standards influence — participate in protocol development
- ✓ Live operational data for continuous product improvement
- ✓ Joint R&D addressing real-world integration challenges
- ✓ Scalability testing at metropolitan deployment scale
- ✓ Safety validation data supporting future regulatory approvals
- ✓ Innovation acceleration through collaborative ecosystem

Selection Criteria for Technology Partners

Dimension	Requirements
Technology Readiness	Proven performance in relevant applications; clear regulatory pathway; TRL 7+
Financial Strength	Adequate resources for development, deployment, and ongoing support commitments
Safety Record	Demonstrated commitment to safety; incident history review; liability coverage
Timeline Alignment	Capability to meet 2027–2029 development schedule
Partnership Approach	Collaborative mindset; flexible business models; long-term commitment
Scalability	Technology capable of metropolitan-scale deployment; expansion to 50+ markets

Technology Partnership Inquiries

Trinity Air Link Transportation System · Fort Worth, Texas
